

Recombinant Human BIN1, His-tagged

Cat. No. BIN1-26316TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human BIN1 with an N terminal His tag; 459 amino acids including the tag, MWt 50.4kDa.
Species	Human
Source	E.coli
ProteinLength	439 amino acids
Description	This gene encodes several isoforms of a nucleocytoplasmic adaptor protein, one of which was initially identified as a MYC-interacting protein with features of a tumor suppressor. Isoforms that are expressed in the central nervous system may be involved in synaptic vesicle endocytosis and may interact with dynamin, synaptojanin, endophilin, and clathrin. Isoforms that are expressed in muscle and ubiquitously expressed isoforms localize to the cytoplasm and nucleus and activate a caspase-independent apoptotic process. Studies in mouse suggest that this gene plays an important role in cardiac muscle development. Alternate splicing of the gene results in ten transcript variants encoding different isoforms. Aberrant splice variants expressed in tumor cell lines have also been described.
Conjugation	HIS
Molecular Weight	50.400kDa inclusive of tags
Tissue specificity	Ubiquitous. Highest expression in the brain and muscle. Isoform IIA is expressed only
