

Recombinant Human ELK1, His-tagged, Myc-tagged

Cat. No. ELK1-31H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human ELK-1 (amino acids 307-428) is produced in <i>E. Coli</i> as a maltose binding protein (MBP) fusion protein with an amino-terminal polyhistidine tag and a c-terminal myc tag (EQKLISEEDL), and having a molecular mass of 60 kDa. Elk-1 is purified by proprietary chromatographic techniques.
Species	Human
Source	E.coli
Protein Length	307-428 a.a.
Description	Elk-1 is a transcription factor that is activated by mitogen-activated protein kinases (MAPKs) and whose main function is the regulation of growth-related proteins in response to extracellular stimuli. Because of the importance of Elk-1 to the regulation of successful cell growth, accurate monitoring of Elk-1 in cells, tissues and animals is crucial for many biomedical research and drug development projects.
Purity	Greater than 95% as determined by SDS-PAGE.
Formulation	ELK-1 is supplied as lyophilized freeze dry powder without additives.
Biological Activity	Recombinant human Elk-1 is phosphorylatable in vitro, using either recombinant active ERK1/2, or with immunoprecipitated ERK1/2 from stimulated cells. This phosphorylation can be monitored by Western blot analysis. Optimization of the cell stimulation protocol, cell lysis procedure, and reaction conditions may be required for

each specific application. Please note: Kinase activity may vary depending on the substrate and reaction conditions.

Storage

Store at 2-8°C if entire vial will be used within 1-2 weeks. Store, frozen at -20°C for longer periods of time. Avoid multiple freeze-thaw cycles.

GENE INFORMATION
Gene Name

ELK1 ELK1, member of ETS oncogene family [Homo sapiens]

Synonyms

ELK1; ELK1, member of ETS oncogene family; ETS domain-containing protein Elk-1; OTTHUMP00000023224; OTTHUMP00000023225; ETS-like gene 1

Gene ID

2002

mRNA Refseq

NM_001114123

Protein Refseq

NP_001107595

UniProt ID

P19419

Chromosome Location

Xp11.2

MIM

311040

Pathway

Endometrial cancer; ErbB signaling pathway; Focal adhesion; GnRH signaling pathway; Insulin signaling pathway; MAPK signaling pathway; Prion diseases; Signalling by NGF

Function

protein binding; sequence-specific DNA binding; transcription factor activity
