

Recombinant Human CCL18, His-tagged

Cat. No. CCL18-30163TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment of Human Macrophage Inflammatory Protein 4 , with an N terminal His tag, 93aa, 10.4kDa inclusive of tag.
Species	Human
Source	E.coli
ProteinLength	68 amino acids
Description	This gene is one of several Cys-Cys (CC) cytokine genes clustered on the q arm of chromosome 17. Cytokines are a family of secreted proteins involved in immunoregulatory and inflammatory processes. The CC cytokines are proteins characterized by two adjacent cysteines. The cytokine encoded by this gene displays chemotactic activity for naive T cells, CD4+ and CD8+ T cells and nonactivated lymphocytes, but not for monocytes or granulocytes. This chemokine attracts naive T lymphocytes toward dendritic cells and activated macrophages in lymph nodes. It may play a role in both humoral and cell-mediated immunity responses.
