

Recombinant Human CD97

Cat. No. CD97-26331TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment of Human CD97 (aa 421-529) with a N terminal proprietary tag: predicted molecular weight 37.62 kDa, inclusive of tag.
Species	Human
Source	Wheat Germ
ProteinLength	109 amino acids
Description	This gene encodes a member of the EGF-TM7 subfamily of adhesion G protein-coupled receptors, which mediate cell-cell interactions. These proteins are cleaved by self-catalytic proteolysis into a large extracellular subunit and seven-span transmembrane subunit, which associate at the cell surface as a receptor complex. The encoded protein may play a role in cell adhesion as well as leukocyte recruitment, activation and migration, and contains multiple extracellular EGF-like repeats which mediate binding to chondroitin sulfate and the cell surface complement regulatory protein CD55. Expression of this gene may play a role in the progression of several types of cancer. Alternatively spliced transcript variants encoding multiple isoforms with 3 to 5 EGF-like repeats have been observed for this gene. This gene is found in a cluster with other EGF-TM7 genes on the short arm of chromosome 19.
Molecular Weight	37.620kDa inclusive of tags
Tissue specificity	Broadly expressed, found on most hematopoietic cells, including activated lymphocytes, monocytes, macrophages, dendritic cells, and granulocytes. Expressed
