

Recombinant Human CDC25A

Cat. No. CDC25A-27902TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Full-length recombinant Human Cdc25A with a N terminal proprietary tag. MWt 94 kDa.
Species	Human
Source	Sf9 Cells
ProteinLength	524 amino acids
Description	CDC25A is a member of the CDC25 family of phosphatases. CDC25A is required for progression from G1 to the S phase of the cell cycle. It activates the cyclin-dependent kinase CDC2 by removing two phosphate groups. CDC25A is specifically degraded in response to DNA damage, which prevents cells with chromosomal abnormalities from progressing through cell division. CDC25A is an oncogene, although its exact role in oncogenesis has not been demonstrated. Two transcript variants encoding different isoforms have been found for this gene.
Molecular Weight	94.000kDa inclusive of tags
Biological activity	Specific activity 31 nmol phosphate released/min/mg.
Form	Liquid
Purity	Densitometry
