

Recombinant Human Human CDK1

Cat. No. CDK1-31590TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human CDK1 and Cyclin-A1 with N-terminal proprietary tags on both proteins; MWt 58 and 81 kDa respectively.
Species	Human
Source	Sf9 Cells
Description	The protein encoded by this gene is a member of the Ser/Thr protein kinase family. This protein is a catalytic subunit of the highly conserved protein kinase complex known as M-phase promoting factor (MPF), which is essential for G1/S and G2/M phase transitions of eukaryotic cell cycle. Mitotic cyclins stably associate with this protein and function as regulatory subunits. The kinase activity of this protein is controlled by cyclin accumulation and destruction through the cell cycle. The phosphorylation and dephosphorylation of this protein also play important regulatory roles in cell cycle control. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
Tissue specificity	Isoform 2 is found in breast cancer tissues.
Biological activity	The Specific activity of CDK1-31590TH was determined to be 38 nmol/min/mg.
