

Recombinant Human CSF3R, Fc-tagged

Cat. No. CSF3R-27467TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment, corresponding to amino acids 25-621 of Human GCSF Receptor fused to the Fc region of human IgG1 (aa 90-330) expressed in modified human 293 cells.
Species	Human
ProteinLength	25-621 a.a.
Description	The protein encoded by this gene is the receptor for colony stimulating factor 3, a cytokine that controls the production, differentiation, and function of granulocytes. The encoded protein, which is a member of the family of cytokine receptors, may also function in some cell surface adhesion or recognition processes. Alternatively spliced transcript variants have been described. Mutations in this gene are a cause of Kostmann syndrome, also known as severe congenital neutropenia.
Conjugation	Fc
Tissue specificity	One or several isoforms have been found in myelogenous leukemia cell line KG-1, leukemia U937 cell line, in bone marrow cells, placenta, and peripheral blood granulocytes. Isoform GCSFR-2 is found only in leukemia U937 cells. Isoform GSCFR-3 is highly exp
Biological activity	The ED50 of CSF3R-27467TH is typically 2-3 ng/ml as measured by its ability to neutralize GCSF mediated proliferation of the murine myeloblastic m-NFS-60 cell line.
