

Recombinant Human DUSP1

Cat. No. DUSP1-28071TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human DUSP1 protein with an N terminal proprietary tag; predicted Mwt: 66.44 kDa inclusive of tag.
Species	Human
Source	Wheat Germ
ProteinLength	367 amino acids
Description	The expression of DUSP1 gene is induced in human skin fibroblasts by oxidative/heat stress and growth factors. It specifies a protein with structural features similar to members of the non-receptor-type protein-tyrosine phosphatase family, and which has significant amino-acid sequence similarity to a Tyr/Ser-protein phosphatase encoded by the late gene H1 of vaccinia virus. The bacterially expressed and purified DUSP1 protein has intrinsic phosphatase activity, and specifically inactivates mitogen-activated protein (MAP) kinase in vitro by the concomitant dephosphorylation of both its phosphothreonine and phosphotyrosine residues. Furthermore, it suppresses the activation of MAP kinase by oncogenic ras in extracts of Xenopus oocytes. Thus, DUSP1 may play an important role in the human cellular response to environmental stress as well as in the negative regulation of cellular proliferation.
Molecular Weight	66.440kDa inclusive of tags
Tissue specificity	Expressed at high levels in the lung, liver placenta and pancreas. Moderate levels seen in the heart and skeletal muscle. Lower levels found in the brain and kidney.
