

Recombinant Human Phospholipase A2, Group IIE, His-tagged

Cat. No. PLA2G2E-69H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human Secreted Phospholipase A2-IIE produced in <i>E. Coli</i> manufactured with N-terminal His-Tag. sPLA2-IIE His-Tagged Fusion Protein is 15.8 kDa protein containing 123 amino acid residues of the human secreted phospholipase A2-IIE and 16 additional amino acid residues – His-Tag.
Species	Human
Source	E.coli
Description	Phospholipase A2 (PLA2) catalyzes the hydrolysis of the sn-2 position of membrane glycerophospholipids to liberate arachidonic acid (AA), a precursor of eicosanoids including prostaglandins and leukotrienes. The same reaction also produces lysophospholipids, which represent another class of lipid mediators. The secretory PLA2 (sPLA2) family, in which 10 isozymes have been identified, consists of low molecular weight, Ca ²⁺ -requiring secretory enzymes that have been implicated in a number of biological processes, such as modification of eicosanoid generation, inflammation, and host defense. This enzyme has been proposed to hydrolyze phosphatidylcholine (PC) in lipoproteins to liberate lyso-PC and free fatty acids in the arterial wall, thereby facilitating the accumulation of bioactive lipids and modified lipoproteins in atherosclerotic foci.

Physical Appearance	Sterile Filtered lyophilized (freeze-dried) powder.
Purification Method	Ni-NTA affinity chromatography.
Purity	Greater than 95% as determined by SDS PAGE.
Formulation	Sterile filtered and lyophilized from 0.5 mg/ml in 0.05M Acetate buffer pH-4.
Solubility	Add 0.2 ml of 0.1M Acetate buffer pH-4 and let the lyophilized pellet dissolve completely. For conversion into higher pH value, we recommend intensive dilution by relevant buffer to a concentration of 10µg/ml. In higher concentrations the solubility of this antigen is limited.
Specificity	The amino acid sequence of the recombinant human Secreted Phospholipase A2-IIe is 100% homologous to the amino acid sequence of the human Secreted Phospholipase A2-IIe without signal sequence.
Applications	Western blotting.
Stability	Store lyophilized protein at -20°C. Aliquot the product after reconstitution to avoid repeated freezing/thawing cycles. Reconstituted protein can be stored at 4°C for a limited period of time; it does not show any change after two weeks at 4°C. The lyophilized protein remains stable until the expiry date when stored at -20°C.

GENE INFORMATION

Gene Name	PLA2G2E phospholipase A2, group IIE [Homo sapiens]
Synonyms	PLA2G2E; Group IIE secretory phospholipase A2; GIIE sPLA2; EC 3.1.1.4; Phosphatidylcholine 2-acylhydrolase GIIE; sPLA(2)-IIE; phospholipase A2, group IIE

Gene ID	30814
mRNA Refseq	NM_014589
Protein Refseq	NP_055404
UniProt ID	Q9NZK7
Chromosome Location	1p36.13
Pathway	Arachidonic acid metabolism; Ether lipid metabolism; Fc epsilon RI signaling pathway; Glycerophospholipid metabolism; GnRH signaling pathway; Linoleic acid metabolism; Long-term depression; MAPK signaling pathway; Metabolic pathways; VEGF signaling pathway; Vascular smooth muscle contraction; alpha-Linolenic acid metabolism
Function	calcium ion binding; phospholipase A2 activity; hydrolase activity
