

Recombinant Human FGF1, His-tagged

Cat. No. FGF1-26555TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length human FGF1 with His tag expressed in a baculovirus system; amino acids 16-155 , approximately 18kDa.
Species	Human
ProteinLength	16-155 a.a.
Description	The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This protein functions as a modifier of endothelial cell migration and proliferation, as well as an angiogenic factor. It acts as a mitogen for a variety of mesoderm- and neuroectoderm-derived cells in vitro, thus is thought to be involved in organogenesis. Multiple alternatively spliced variants encoding different isoforms have been described.
