

Active Recombinant Rat Btk protein, GST-tagged

Cat. No. Btk-185R **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Rat Btk fused with GST tag at N-terminal was expressed in Insect cells.
Species	Rat
Source	Insect Cells
Description	BTK (also known as Bruton tyrosine kinase) plays a crucial role in B-lymphocyte differentiation and activation. BTK interacts with SRC homology 3 domains of FYN, LYN and HCK that are activated upon stimulation of B- and T-cell receptors. Defects in the BTK gene cause Agammaglobulinemia, an X-linked immunodeficiency characterized by failure to produce mature B lymphocyte cells and associated with a failure of Ig heavy chain rearrangement. The unique role of BTK makes it a desirable target for potential anti-cancer, anti-inflammatory and anti-viral agents as well as other treatments.
