

Recombinant Human FPR1 Protein

Cat. No. GNAI2-31364TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human FPR1 lacking the N-glycosylation sites at Asn4 and Asn10, with N terminal FLAG tag and C terminal His tag co-expressed with inhibitory G-protein $G_{i2}\beta_1\gamma_2$, prepared from Sf9 insect cells triple-infected with
Species	Human
Description	The protein encoded by this gene is an alpha subunit of guanine nucleotide binding proteins (G proteins). The encoded protein contains the guanine nucleotide binding site and is involved in the hormonal regulation of adenylate cyclase. Several transcript variants encoding different isoforms have been detected for this gene, but the full-length nature of only two are known so far.
