

Recombinant Monkey Ep300 Protein, His tagged

Cat. No. EP300-1481R **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Monkey Ep300 Protein with His tag was expressed in HEK293.
Species	Monkey
Source	HEK293
Description	This gene encodes the adenovirus E1A-associated cellular p300 transcriptional co-activator protein. It functions as histone acetyltransferase that regulates transcription via chromatin remodeling and is important in the processes of cell proliferation and differentiation. It mediates cAMP-gene regulation by binding specifically to phosphorylated CREB protein. This gene has also been identified as a co-activator of HIF1A (hypoxia-inducible factor 1 alpha), and thus plays a role in the stimulation of hypoxia-induced genes such as VEGF. Defects in this gene are a cause of Rubinstein-Taybi syndrome and may also play a role in epithelial cancer.
Molecular Mass	The protein has a calculated MW of 44 kDa.
