

Recombinant Human GSTO1, His-tagged

Cat. No. GSTO1-28119TH Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant full length human glutathione S transferase Omega 1 with an amino-terminal hexahistidine tag; amino acids 1-241, 28kDa.
Species	Human
Source	E.coli
Protein Length	1-241 a.a.
Description	The protein encoded by this gene is an omega class glutathione S-transferase (GST) with glutathione-dependent thiol transferase and dehydroascorbate reductase activities. GSTs are involved in the metabolism of xenobiotics and carcinogens. The encoded protein acts as a homodimer and is found in the cytoplasm. Three transcript variants encoding different isoforms have been found for this gene.
