

Recombinant Human GUCA1A

Cat. No. GUCA1A-28157TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human GCAP1 with a N terminal proprietary tag; Predicted MW 47.52 kDa.
Species	Human
Source	Wheat Germ
ProteinLength	201 amino acids
Description	This gene plays a role in the recovery of retinal photoreceptors from photobleaching. In the recovery phase, the phototransduction messenger cGMP is replenished by retinal guanylyl cyclase-1 (GC1). GC1 is activated by decreasing Ca(2+) concentrations following photobleaching. The protein encoded by this gene, guanylyl cyclase activating protein 1 (GCAP1), mediates the sensitivity of GC1 to Ca(2+) concentrations. GCAP1 promotes activity of GC1 at low Ca(2+) concentrations and inhibits GC1 activity at high Ca(2+) concentrations. Mutations in this gene cause autosomal dominant cone dystrophy (COD3); a disease characterized by reduced visual acuity associated with progressive loss of color vision. Mutations in this gene prohibit the inactivation of RetGC1 at high Ca(2+) concentrations; causing the constitutive activation of RetGC1 and, presumably, increased cell death. This gene is expressed in retina and spermatagonia.
Molecular Weight	47.520kDa inclusive of tags
