

Recombinant Human HLF, His-tagged

Cat. No. HLF-27715TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human HLF (amino acids 1-295) with a N terminal His tag. 315 amino acids with a predicted MWt 35.3 kDa including tag.
Species	Human
Source	E.coli
ProteinLength	295 amino acids
Description	This gene encodes a member of the proline and acidic-rich (PAR) protein family, a subset of the bZIP transcription factors. The encoded protein forms homodimers or heterodimers with other PAR family members and binds sequence-specific promoter elements to activate transcription. Chromosomal translocations fusing portions of this gene with the E2A gene cause a subset of childhood B-lineage acute lymphoid leukemias. Alternatively spliced transcript variants have been described, but their biological validity has not been determined.
Conjugation	HIS
Molecular Weight	35.300kDa inclusive of tags
Tissue specificity	Highly expressed in liver; lower levels in lung and kidney.
Form	Liquid
