

Recombinant Human HNRNPF

Cat. No. HNRNPF-27567TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human hnRNP F with N terminal proprietary tag; Predicted MWt 71.72 kDa.
Species	Human
Source	Wheat Germ
ProteinLength	415 amino acids
Description	This gene belongs to the subfamily of ubiquitously expressed heterogeneous nuclear ribonucleoproteins (hnRNPs). The hnRNPs are RNA binding proteins that complex with heterogeneous nuclear RNA (hnRNA). These proteins are associated with pre-mRNAs in the nucleus and regulate alternative splicing, polyadenylation, and other aspects of mRNA metabolism and transport. While all of the hnRNPs are present in the nucleus, some seem to shuttle between the nucleus and the cytoplasm. The hnRNP proteins have distinct nucleic acid binding properties. The protein encoded by this gene has three repeats of quasi-RRM domains that bind to RNAs which have guanosine-rich sequences. This protein is very similar to the family member hnRPH. Multiple alternatively spliced variants, encoding the same protein, have been identified.
Molecular Weight	71.720kDa inclusive of tags
Tissue specificity	Expressed ubiquitously.
