

Recombinant Human HSPA1B, His-tagged

Cat. No. HSPA1B-29395TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length human Hsp70 cloned from a human cDNA library with His tag.
Species	Human
Source	E.coli
Description	This intronless gene encodes a 70kDa heat shock protein which is a member of the heat shock protein 70 family. In conjunction with other heat shock proteins, this protein stabilizes existing proteins against aggregation and mediates the folding of newly translated proteins in the cytosol and in organelles. It is also involved in the ubiquitin-proteasome pathway through interaction with the AU-rich element RNA-binding protein 1. The gene is located in the major histocompatibility complex class III region, in a cluster with two closely related genes which encode similar proteins.
Conjugation	HIS
Tissue specificity	HSPA1B is testis-specific.
Biological activity	HSPA1B-29395TH has ATPase activity at the time of manufacture of 3.3 μ M phosphate liberated/hr/ μ g protein in a 200 μ l reaction at 37°C (pH7.5) in the presence of 20ul of 1mM ATP using a Malachite Green assay.
