

Recombinant Human IL12RB2

Cat. No. IL12RB2-29640TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment of Human IL12RB2 with an N-terminal proprietary tag; Predicted MW 37.73 kDa
Species	Human
Source	Wheat Germ
ProteinLength	110 amino acids
Description	The protein encoded by this gene is a type I transmembrane protein identified as a subunit of the interleukin 12 receptor complex. The coexpression of this and IL12RB1 proteins was shown to lead to the formation of high-affinity IL12 binding sites and reconstitution of IL12 dependent signaling. The expression of this gene is up-regulated by interferon gamma in Th1 cells, and plays a role in Th1 cell differentiation. The up-regulation of this gene is found to be associated with a number of infectious diseases, such as Crohns disease and leprosy, which is thought to contribute to the inflammatory response and host defense.
Molecular Weight	37.730kDa
Tissue specificity	Isoform 2 is expressed at similar levels in both naive and activated T-cells.
Form	Liquid
Purity	Proprietary Purification
