

## Caspase-9 fluorometric assay Kit

**Cat. No.** Kit-0176    **Lot. No.** (See product label)

### SPECIFICATION

|                         |                                                                                                                         |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b> | Based on the detection of AFC (7-amino-4-trifluoromethyl coumarin) after cleavage from the labelled substrate LEHD-AFC. |
| <b>Size</b>             | 25 tests                                                                                                                |
| <b>Applications</b>     | Fluorescence microscopy                                                                                                 |
| <b>Storage</b>          | -20°C                                                                                                                   |
| <b>Kit Components</b>   | 25ml Cell Lysis Buffer, 2ml 2X Reaction Buffer, 125µLEHD-AFC Substrate (1mM), 100µDDT (1M).                             |
