

Isocitrate Colorimetric Assay Kit

Cat. No. Kit-0483 **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Isocitrate Assay Kit (Colorimetric) is used for quantitative determination of Isocitrate (Isocitric Acid) using colourmetric methods.
Description	ISOCITRATE (ISOCITRIC ACID) is a substrate in the citric acid (TCA) cycle. Isocitrate is formed by the isomerization of citrate catalyzed by the enzyme aconitase. Isocitrate is oxidized by isocitrate dehydrogenase producing α-ketoglutarate and generating NADPH. Isocitrate is commonly found in many fruits and vegetables and their processed products. Industrially, isocitrate is used as a marker to identify the quality and purity of fruit juices. This isocitrate assay measures the NADPH generated from the oxidation of isocitrate. The NADPH converts the dye to an intense violet color with an absorption maximum at 565 nm. The increase in absorbance at 565 nm is directly proportional to the isocitrate concentration.
Applications	Isocitrate determination in food, beverage, biological samples (e.g. cell lysate, tissue homogenate, serum, etc.)
Usage	For research use only (RUO)
Storage	Store all components at -20°C upon receiving.
Kit Components	Assay Buffer 10 mL Enzyme A 120 μ NADP/MTT 1 mL Enzyme B 120 μ Standard 1 mL
Detection method	Colorimetric
Compatible Sample	Beverage, Food, Cell lysate, Serum, Tissue homogenate

Types

Features & Benefits

Fast and sensitive. Linear detection range (2 μ sample): 2 to 5 μ M for 1 min reaction. Convenient and high-throughput. Homogeneous "mix-incubate-measure" type assay. Can be readily automated on HTS liquid handling systems for processing thousands of samples per day.
