Lactate Assay Kit II

Cat. No. Kit-0499 **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Lactate Assay Kit II is used for detecting L(+)-Lactate.
Description	Lactate (CH3CH(OH)COO-) plays important roles in many biological processes. Abnormally high concentrations of lactate have been related to disease states such as diabetes and lactic acidosis, etc. L(+)-Lactate is the major lactate stereoisomer formed in human intermediary metabolism and is present in blood. D(-)-Lactate is also present but only at about 1-5% of the concentration of L(+)-Lactate. In the Lactate Assay Kit, lactate is oxidized by lactate dehydrogenase to generate a product which interacts with a probe to produce a color (λmax = 450 nm). The kit detects L(+)-Lactate in biological samples such as serum or plasma, cells, culture and fermentation media at a level of 0.02 mM – 10 mM. There is no need for pretreatment or purification of samples.
Target Species	Mammals
Usage	For research use only (RUO)
Storage	Store the kit at -20°C.
Kit Components	Lactate Assay Buffer 25 mLLactate Enzyme Mix (Lyophilized) 1 vialLactate Substrate Mix (Lyophilized) 1 vialL(+)-Lactate Standard (100 mM) 100 µL
Detection method	Colorimetric
Compatible Sample	Biological Fluid, Cell Culture Supernatant, Plasma, Serum, Tissue Culture

Tel: 1-631-559-9269 1-516-512-3133
