

Recombinant Human LIN28A Protein

Cat. No. LIN28A-29947TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human LIN28 produced in E. coli is a single, non-glycosylated polypeptide chain containing 222 amino acids (including 13- residue C-terminal TAT peptide).
Species	Human
Source	E.coli
Description	This gene encodes a LIN-28 family RNA-binding protein that acts as a posttranscriptional regulator of genes involved in developmental timing and self-renewal in embryonic stem cells. The encoded protein functions through direct interaction with target mRNAs and by disrupting the maturation of certain miRNAs involved in embryonic development. This protein prevents the terminal processing of the LET7 family of microRNAs which are major regulators of cellular growth and differentiation. Aberrant expression of this gene is associated with cancer progression in multiple tissues.
Form	Sterile filtered colorless solution.
Molecular Mass	24.4 kDa
