

Monoamine Oxidase A/B Fluorometric Detection Kit

Cat. No. Kit-0538 **Lot. No.** (See product label)

SPECIFICATION

Product Overview	The Fluoro MAO-A/B detection kit utilizes a non-fluorescent detection reagent to measure H ₂ O ₂ released from the conversion of a substrate to its aldehyde via MAO-A/B. Furthermore H ₂ O ₂ oxidizes the detection reagent in a 1:1 stoichiometry to produce a fluorescent product resorufin. This oxidation is catalyzed by Peroxidase. The fluorescent monoamine oxidase detection kit can be used to monitor MAO activity and the screening of MAO inhibitors.
Applications	Fluorescence plate reader
Usage	1. For Research use only. Not for use in diagnostic procedures. 2. Practice safe laboratory procedures by wearing protective clothing and eyewear. 3. The fluorescent product of the detection reagent is not stable in the presence of thiols (DTT or 2-mercaptoethanol). Keep these reactants below 10mM. If you are using your own buffer, keep the reaction between pH 7-8 (optimal pH 7.4). 4. NADH and glutathione (reduced form: GSH) may interfere with the assay. See Technical note 3.
Storage	1. The kit contains multiple storage temperature components. Please see labels of individual components for storage instructions. 2. Once a vial of the Detection reagent is opened, it should be used promptly and frozen since it is subject to oxidation by air.
