

Recombinant Human MAF

Cat. No. MAF-26878TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment of Human c-Maf with N terminal proprietary tag; predicted MWt: 36.63 kDa including the tag.
Species	Human
Source	Wheat Germ
ProteinLength	100 amino acids
Description	<p>The protein encoded by this gene is a DNA-binding, leucine zipper-containing transcription factor that acts as a homodimer or as a heterodimer. Depending on the binding site and binding partner, the encoded protein can be a transcriptional activator or repressor. This protein plays a role in the regulation of several cellular processes, including embryonic lens fiber cell development, increased T-cell susceptibility to apoptosis, and chondrocyte terminal differentiation. Defects in this gene are a cause of juvenile-onset pulverulent cataract as well as congenital cerulean cataract 4 (CCA4). Two transcript variants encoding different isoforms have been found for this gene.</p>
Molecular Weight	36.630kDa inclusive of tags
Tissue specificity	Expressed in endothelial cells.
