

SERPINE1 (Human) Chromogenic Activity Assay Kit

Cat. No. Kit-0782 **Lot. No.** (See product label)

SPECIFICATION

Product Overview	SERPINE1 (Human) Chromogenic Activity Assay Kit is developed to determine human SERPINE1 activity in cell culture supernatants.
Description	Type I plasminogen activator inhibitor (PAI-1) is a 50 kDa serpin family member that inhibits tissue- and urokinase-type plasminogen activators (tPA, uPA). This protein appears to be an important regulator of plasminogen activation by tPA and extracellular proteolysis by uPA. The plasminogen activator proteolytic enzyme systems are important not only for fibrinolysis but also for extracellular matrix remodeling and have been implicated in a number of normal and pathological processes including angiogenesis, ovulation and embryogenesis, thrombotic and hemorrhagic disorders, connective tissue diseases, neoplasm, and sepsis. PAI-1 is a prognosticator in breast cancer, gastric cancer, various forms of lung cancer, and cervical cancer.
Target Species	Human
Usage	For research use only (RUO)
Storage	Store components of the kit up to the expiration date. Store standard, Plasminogen, and Plasmin Substrate at -20°C. Store Microplate and Assay Diluent at 2-8°C. Unused microplate wells may be returned and resealed. Opened Assay Diluent may be stored for up to 30 days at 2-8°C.
Kit Components	Microplate: One 96-well polystyrene microplate (12 strips of 8 wells). 96(8x12)
