

## SIRT5 fluorometric drug discovery assay Kit

**Cat. No.** Kit-0788    **Lot. No.** (See product label)

### SPECIFICATION

#### Product Overview

Easy-to-use kits (two-step) for screening SIRT5 inhibitors/activators; includes enough active enzyme for entire plate Includes optimal substrate selected from a panel of succinylated sites 96-well plate included, but can be adapted to higher well format Control inhibitors included Suitable for high-throughput screening ( $Z'$ -factors  $>0.73$ ) Optimal, specific SIRT5 substrate means low enzyme concentration, making "hit" validation easy The SIRT5 Fluorometric Drug Discovery Kit is a complete assay system designed to measure the lysyl desuccinylase activity of the recombinant human SIRT5 included in the kit. A black 96-well microplate is packaged with the kit, but it should be noted that reagents of the FLUOR DE LYS system have also been successfully employed in other formats, including cuvettes and 384-well plates. The SIRT5 Fluorometric Activity Assay is based on the unique FLUOR DE LYS-Succinyl Substrate/Developer combination. The assay procedure has two steps. The FLUOR DE LYS-Succinyl Substrate, which comprises a single lysine residue, N $\epsilon$ -succinylated on its side-chain, is first incubated with human recombinant SIRT5 together with the cosubstrate NAD $^{+}$ . Desuccinylation of FLUOR DE LYS-Succinyl sensitizes it so that, in the second step, treatment with the FLUOR DE LYS Developer produces a fluorophore. Use of a succinylated, rather than acetylated substrate with SIRT5 results in readily observed saturation kinetics and a greater than 1000-fold increase in assay sensitivity.
