

Recombinant Human LYNX1 protein, His-tagged

Cat. No. LYNX1-12H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human LYNX1(aa 21-131) fused with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	21-131 a.a.
Description	This gene encodes a member of the Ly-6/neurotoxin gene family, a group of lymphocyte antigens that attach to the cell surface by a glycosylphosphatidylinositol anchor and have a unique structure showing conserved 8-10 cysteine residues with a characteristic spacing pattern. Functional analysis indicates that this protein is not a ligand or neurotransmitter but has the capacity to enhance nicotinic acetylcholine receptor function in the presence of acetylcholine. This gene may also play a role in the pathogenesis of psoriasis vulgaris. Alternatively spliced variants encoding different isoforms have been identified.
