

## Active Recombinant H3N2 (A/Wyoming/03/2003) HA Protein, His-tagged

**Cat. No.** HA-400V    **Lot. No.** (See product label)

### SPECIFICATION

|                         |                                                                                                                                                                                      |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b> | Active Recombinant H3N2 (A/Wyoming/03/2003) HA Protein(ABX10525.1) (Met1-Trp530) was expressed in Insect Cells with a polyhistidine tag at the C-terminus.                           |
| <b>Species</b>          | H3N2                                                                                                                                                                                 |
| <b>Source</b>           | Insect Cells                                                                                                                                                                         |
| <b>ProteinLength</b>    | 1-530 aa                                                                                                                                                                             |
| <b>Form</b>             | Lyophilized from sterile 20 mM Tris, 500 mM NaCl, 10 % glycerol, pH 7.0.                                                                                                             |
| <b>Bio-activity</b>     | Measured by its ability to agglutinate guinea pig red blood cells. HA titer is 0.01-0.04µg/mL for 1% GRBC.                                                                           |
| <b>Molecular Mass</b>   | The recombinant hemagglutinin of Influenza A virus (A/Wyoming/03/2003 (H3N2)) consists 525 amino acids and predicts a molecular mass of 59.1 kDa.                                    |
| <b>Endotoxin</b>        | < 1.0 EU per µg of the protein as determined by the LAL method.                                                                                                                      |
| <b>Purity</b>           | > 95 % as determined by SDS-PAGE                                                                                                                                                     |
| <b>Storage</b>          | Store it under sterile conditions at -20°C to -80°C upon receiving. Recommend to aliquot the protein into smaller quantities for optimal storage. Avoid repeated freeze-thaw cycles. |

## Reconstitution

It is recommended that sterile water be added to the vial to prepare a stock solution of 0.2 ug/ul. Centrifuge the vial at 4°C before opening to recover the entire contents.
