

## Recombinant Human RAET1L Protein, His-tagged

Cat. No. RAET1L-722H    Lot. No. (See product label)

### SPECIFICATION

|                             |                                                                                                                                                           |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b>     | Recombinant human RAET1L (AAK91503.1) (Met1-Ser217) was expressed with a polyhistidine tag at the C-terminus.                                             |
| <b>Species</b>              | Human                                                                                                                                                     |
| <b>Source</b>               | HEK293                                                                                                                                                    |
| <b>ProteinLength</b>        | 1-217 a.a.                                                                                                                                                |
| <b>Predicted N Terminal</b> | Arg 26                                                                                                                                                    |
| <b>Form</b>                 | Lyophilized from sterile PBS, pH 7.4, 5% ~ 8% trehalose and mannitol.                                                                                     |
| <b>Molecular Mass</b>       | The recombinant human RAET1L consists 203 amino acids and predicts a molecular mass of 23.2 kDa.                                                          |
| <b>Endotoxin</b>            | < 1.0 EU per µg of the protein as determined by the LAL method.                                                                                           |
| <b>Purity</b>               | >95 % as determined by SDS-PAGE.                                                                                                                          |
| <b>Stability</b>            | Samples are stable for up to twelve months from date of receipt at -70°C.                                                                                 |
| <b>Storage</b>              | Store it under sterile conditions at -20°C~-70°C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles. |

**Reconstitution**

It is recommended that sterile water be added to the vial to prepare a stock solution of 0.25 ug/ul. Centrifuge the vial at 4°C before opening to recover the entire contents.

**GENE INFORMATION**

**Gene Name** RAET1L retinoic acid early transcript 1L [ Homo sapiens ]

**Official Symbol** RAET1L

**Synonyms** ULBP6; UL16 binding protein 6

**Gene ID** 154064

**mRNA Refseq** NM\_130900

**Protein Refseq** NP\_570970

**MIM** 611047

**UniProt ID** Q5VY80

**Chromosome Location** 6q25.1
