

Recombinant Human MCM6

Cat. No. MCM6-28042TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human MCM6 (aa 1-821) with N-terminal proprietary tag, 116.38 kDa.
Species	Human
Source	Wheat Germ
ProteinLength	821 amino acids
Description	The protein encoded by this gene is one of the highly conserved mini-chromosome maintenance proteins (MCM) that are essential for the initiation of eukaryotic genome replication. The hexameric protein complex formed by the MCM proteins is a key component of the pre-replication complex (pre_RC) and may be involved in the formation of replication forks and in the recruitment of other DNA replication related proteins. The MCM complex consisting of this protein and MCM2, 4 and 7 proteins possesses DNA helicase activity, and may act as a DNA unwinding enzyme. The phosphorylation of the complex by CDC2 kinase reduces the helicase activity, suggesting a role in the regulation of DNA replication.
