

## Recombinant H5N2 (A/ostrich/South Africa/AI1091/2006) HA Protein, His-tagged

Cat. No. HA-808V Lot. No. (See product label)

### SPECIFICATION

|                             |                                                                                                                                                                                                                                                                 |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b>     | Recombinant N-terminal segment (Met 1-Arg 355) of the influenza hemagglutinin (A/ostrich/South Africa/AI1091/2006 (H5N2)) (ABQ24010.1), termed as HA1, was fused with a polyhistidine tag at the C-terminus                                                     |
| <b>Species</b>              | H5N2                                                                                                                                                                                                                                                            |
| <b>Source</b>               | HEK293                                                                                                                                                                                                                                                          |
| <b>ProteinLength</b>        | 1-355 a.a.                                                                                                                                                                                                                                                      |
| <b>Predicted N Terminal</b> | Asp 29                                                                                                                                                                                                                                                          |
| <b>Form</b>                 | Lyophilized from sterile PBS, pH 7.4, 5% ~ 8% trehalose and mannitol.                                                                                                                                                                                           |
| <b>Molecular Mass</b>       | The secreted recombinant HA1 subunit of influenza A H5N1 HA (A/ostrich/SouthAfrica/AI1091/2006 (H5N2)) comprises 338 amino acids and has a predicted molecular mass of 38.2 kDa. As a result of glycosylation, it migrates as an approximately 50 kDa band in S |
| <b>Endotoxin</b>            | < 1.0 EU per µg of the protein as determined by the LAL method.                                                                                                                                                                                                 |
| <b>Purity</b>               | >95 % as determined by SDS-PAGE                                                                                                                                                                                                                                 |
| <b>Stability</b>            | Samples are stable for up to twelve months from date of receipt at -70°C.                                                                                                                                                                                       |

**Storage**

Store it under sterile conditions at -20°C~-70°C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

**Reconstitution**

It is recommended that sterile water be added to the vial to prepare a stock solution of 0.25 ug/ul. Centrifuge the vial at 4°C before opening to recover the entire contents.
