

Recombinant Human Heat Shock 70kDa Protein 9 (Mortalin), His-tagged

Cat. No. HSPA9-334H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human HSPA9 protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques (654 aa, 71 kDa).
Species	Human
Source	E.coli
ProteinLength	47-679 aa
Description	HSPA9 belongs to the heat shock protein 70 family which contains both heat-inducible and constitutively expressed members. HSPA9 was localized to chromosome 5, band q31, a region that is frequently deleted in myeloid leukemias and myelodysplasia (MDS), making it a candidate tumor suppressor gene, which is consistent with the biological function of its murine homologue. Also it inhibits nuclear translocation, transcriptional activation, and control of centrosome-duplication functions of p53.
Formulation	Liquid. In 20 mM Tris-HCl buffer (pH 8.0) containing 0.5mM DTT, 10% glycerol.
Molecular Weight	71 kDa (654 aa).
Purity	> 95% by SDS – PAGE.
