

## Active Recombinant H2N2 (A/Guiyang/1/1957) HA Protein, His-tagged

**Cat. No.** HA-643V    **Lot. No.** (See product label)

### SPECIFICATION

|                             |                                                                                                                                                                                                                                                               |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b>     | Recombinant Influenza A virus (A/Guiyang/1/1957(H2N2)) hemagglutinin (ACD85231.1) (Met1-Gln525) was expressed with a C-terminal polyhistidine tag.                                                                                                            |
| <b>Species</b>              | H2N2                                                                                                                                                                                                                                                          |
| <b>Source</b>               | Insect Cells                                                                                                                                                                                                                                                  |
| <b>ProteinLength</b>        | 1-525 a.a.                                                                                                                                                                                                                                                    |
| <b>Predicted N Terminal</b> | Asp 16                                                                                                                                                                                                                                                        |
| <b>Form</b>                 | Lyophilized from sterile 20 mM Tris, 500 mM NaCl, 10 % glycerol, pH 7.4, 5%~8% trehalose and mannitol.                                                                                                                                                        |
| <b>Bio-activity</b>         | Measured by its ability to agglutinate guinea pig red blood cells. HA titer is 1-4 ng/mL for 1% GRBC.                                                                                                                                                         |
| <b>Molecular Mass</b>       | The recombinant hemagglutinin of Influenza A virus (A/Guiyang/1/1957(H2N2)) comprises 521 amino acids and has a predicted molecular mass of 59 kDa. The apparent molecular mass of the protein is approximately 61 kDa in SDS-PAGE under reducing conditions. |
| <b>Endotoxin</b>            | < 1.0 EU per µg of the protein as determined by the LAL method.                                                                                                                                                                                               |

|                       |                                                                                                                                                                                |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Purity</b>         | >95 % as determined by SDS-PAGE.                                                                                                                                               |
| <b>Stability</b>      | Samples are stable for up to twelve months from date of receipt at -70°C.                                                                                                      |
| <b>Storage</b>        | Store it under sterile conditions at -20°C~-70°C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.                      |
| <b>Reconstitution</b> | It is recommended that sterile water be added to the vial to prepare a stock solution of 0.25 ug/ul. Centrifuge the vial at 4°C before opening to recover the entire contents. |
