

Recombinant Human NANS

Cat. No. NANS-28782TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human NANS expressed in <i>Saccharomyces cerevisiae</i> ; amino acids 1-359 , 40.3kDa.
Species	Human
ProteinLength	1-359 a.a.
Description	This gene encodes an enzyme that functions in the biosynthetic pathways of sialic acids. In vitro, the encoded protein uses N-acetylmannosamine 6-phosphate and mannose 6-phosphate as substrates to generate phosphorylated forms of N-acetylneuraminic acid (Neu5Ac) and 2-keto-3-deoxy-D-glycero-D-galacto-nononic acid (KDN), respectively; however, it exhibits much higher activity toward the Neu5Ac phosphate product. In insect cells, expression of this gene results in Neu5Ac and KDN production. This gene is related to the <i>E. coli</i> sialic acid synthase gene <i>neuB</i>, and it can partially restore sialic acid synthase activity in an <i>E. coli neuB</i>-negative mutant.
