

Recombinant Mouse Tmprss2 protein, His-tagged

Cat. No. Tmprss2-4893M **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Mouse Tmprss2(105-490 aa) fused with His tag was expressed in HEK293.
Species	Mouse
Source	HEK293
ProteinLength	105-490 aa
Description	This gene encodes a protein that belongs to the serine protease family. The encoded protein contains a type II transmembrane domain, a receptor class A domain, a scavenger receptor cysteine-rich domain and a protease domain. Serine proteases are known to be involved in many physiological and pathological processes. This gene was demonstrated to be up-regulated by androgenic hormones in prostate cancer cells and down-regulated in androgen-independent prostate cancer tissue. The protease domain of this protein is thought to be cleaved and secreted into cell media after autocleavage. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
Form	Tris-based buffer,50% glycerol
