

Recombinant Human CLCA1 protein, His-tagged

Cat. No. CLCA1-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CLCA1(a.a. 22-695) fused with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	22-695 a.a.
Description	This gene encodes a member of the calcium sensitive chloride conductance protein family. To date, all members of this gene family map to the same region on chromosome 1p31-p22 and share a high degree of homology in size, sequence, and predicted structure, but differ significantly in their tissue distributions. The encoded protein is expressed as a precursor protein that is processed into two cell-surface-associated subunits, although the site at which the precursor is cleaved has not been precisely determined. The encoded protein may be involved in mediating calcium-activated chloride conductance in the intestine.
Form	PBS buffer (pH 7.4).
