

Recombinant Human TLR8 protein, His-tagged

Cat. No. TLR8-930H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human TLR8(aa 27-827) fused with His-tag was expressed in Yeast.
Species	Human
Source	Yeast
ProteinLength	27-827 a.a.
Description	The protein encoded by this gene is a member of the Toll-like receptor (TLR) family which plays a fundamental role in pathogen recognition and activation of innate immunity. TLRs are highly conserved from Drosophila to humans and share structural and functional similarities. They recognize pathogen-associated molecular patterns (PAMPs) that are expressed on infectious agents, and mediate the production of cytokines necessary for the development of effective immunity. The various TLRs exhibit different patterns of expression. This gene is predominantly expressed in lung and peripheral blood leukocytes, and lies in close proximity to another family member, TLR7, on chromosome X.
