

Recombinant Human TP53 protein, GST-tagged

Cat. No. TP53-15H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human TP53 fused with GST tag at N-terminal was expressed in E. coli.
Species	Human
Source	E.coli
Description	p53 is a key regulator of cell growth and acts as a tumor suppressor gene. Wild-type p53 gene can suppress transformation of rat embryo fibroblasts in cell culture by other oncogenes such as the adenovirus E1A and Ras. DNA tumor viruses such as SV40 large T antigen and the adenovirus E1A plus E1B-55Kd proteins bind to p53 and inactivate its tumor suppressor activities leading to cellular transformation. Mutational inactivation of the p53 gene is detected in more than 50% of human cancers. Mutation of p53 renders cancer cells more resistant to current cancer therapies due to lack of p53-mediated apoptosis.
