

Active Recombinant Human IL7 protein

Cat. No. IL7-146H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human IL7 was expressed in E. coli.
Species	Human
Source	E.coli
Description	IL7 is a secreted cytokine of the hemopoietin family that primarily affects early B and T cells and plays an important role in stimulating the proliferation of lymphoid progenitors. IL7 is produced by stromal epithelial cells of the thymus, bone marrow, and intestines. Human and murine IL7 share 60% sequence homology at the primary level and known to exhibit cross species activity. Designated CD127, the human IL7 receptor is a strongly glycosylated membrane protein of 76 kDa. Recombinant Human IL7 is a 17.7 kDa, non-glycosylated protein.
Form	Lyophilized from a 0.2 µm filtered solution in sodium phosphate and NaCl
Bio-activity	The ED50 as determined by dose-dependent stimulation of mouse lymphoma was <0.5ng/ml
Molecular Mass	17.7 kDa
Endotoxin	<1.0 EU/µg of recombinant protein as determined by the LAL method.
Purity	>95%

Applications	Cell Assay
Storage	The lyophilized protein is stable for at least one year from date of receipt at -70 centigrade. Upon reconstitution, this cytokine can be stored in working aliquots at 2 centigrade - 8 centigrade for one month, or at -20 centigrade for six months, with a carrier protein without detectable loss of activity. Avoid repeated freeze/thaw cycles.
Reconstitution	A quick spin of the vial followed by reconstitution in distilled water to a concentration not less than 0.1 mg/mL. This solution can then be diluted into other buffers.
GENE INFORMATION	
Gene Name	IL7 interleukin 7 [Homo sapiens]
Official Symbol	IL7
Synonyms	IL7; interleukin 7; interleukin-7; IL 7; IL-7;
Gene ID	3574
mRNA Refseq	NM_000880
Protein Refseq	NP_000871
MIM	146660
UniProt ID	P13232
Chromosome Location	8q12-q13
Pathway	Cytokine Signaling in Immune system, organism-specific biosystem; Cytokine-
