

Active Recombinant Human SPHK1 protein, GST-tagged

Cat. No. SPHK1-174H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human SPHK1 fused with an N-terminal GST tag was expressed in Insect cells.
Species	Human
Source	Insect Cells
Description	SPHK1 catalyzes the phosphorylation of sphingosine to form sphingosine-1-phosphate (SPP) which is a novel lipid messenger with both intracellular and extracellular functions. Various stimuli increase cellular levels of SPP by activation of SPHK1. Competitive inhibitors of SPHK1 block formation of SPP and selectively inhibit cellular proliferation induced by a variety of factors. SPHK1/sphingosine-1-phosphate pathway contributes to colon carcinogenesis. SPHK1 plays a key role in the generation and release of proinflammatory mediators triggered by anaphylatoxins from human macrophages and also is involved in the process of immune cell motility.
