

Recombinant E.coli Transcription Termination/antitermination L Factor

Cat. No. NusA-391E **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant NusA was expressed in E.coli and purified by using conventional chromatography techniques, 54 kDa (495 aa).
Species	E.coli
Source	E.coli
Description	NusA is a key component in both Prevention and enhancement of transcriptional termination. It is important in both Rho-dependent and intrinsic termination, as well as in lambda and other phage antitermination systems. The gene was first identified by isolation of the nusA mutation, which restricts bacteriophage I growth by preventing the antitermination activity of the I N protein. NusA is involved in transcriptional antitermination in the cell. It has been shown to specifically aid in read-through of the RNA polymerase genes rpoB and rpoC, as well as in successful synthesis of the ribosomal RNA genes.

Formulation Liquid. In Phosphate Buffered Saline (pH 7.4)

Purity > 95% by SDS - PAGE

Concentration 1 mg/ml (determined by Bradford assay)

Storage Can be stored at +4°C short term (1-2 weeks). For long term storage, aliquot and store at -20°C or -70°C. Avoid repeated freezing and thawing cycles.

GENE INFORMATION

Gene Name [nusA transcription termination/antitermination L factor \[Escherichia coli str. K-12 substr. MG1655 \]](#)

Synonyms ECK3158; JW3138; nusA; transcription termination/antitermination L factor; transcription pausing; L factor

Gene ID [947682](#)

Protein Refseq [NP_417638](#)
