

Recombinant Human BMP7 protein, His/S-tagged

Cat. No. BMP7-207H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human BMP7 fused with His/S tag was expressed in E. coli.
Species	Human
Source	E.coli
Description	The bone morphogenetic proteins (BMPs) are a family of secreted signaling molecules that can induce ectopic bone growth. Many BMPs are part of the transforming growth factor-beta (TGFB) superfamily. BMPs were originally identified by an ability of demineralized bone extract to induce endochondral osteogenesis in vivo in an extraskeletal site. Based on its expression early in embryogenesis, the BMP encoded by this gene has a proposed role in early development and possible bone inductive activity.
Form	Lyophilized from sterile PBS, pH 7.4
Purity	> 95 % as determined by SDS-PAGE
Storage	Store at -70 centigrade. Avoid repeated freeze/thaw cycles.
