

Recombinant Human NTRK2

Cat. No. NTRK2-31620TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Fragment from Human TrkB corresponding to amino acids 455-822. Expressed with Baculovirus in Sf9 insect cells using an N-terminal enzyme tag.
Species	Human
ProteinLength	455-822 a.a.
Description	This gene encodes a member of the neurotrophic tyrosine receptor kinase (NTRK) family. This kinase is a membrane-bound receptor that, upon neurotrophin binding, phosphorylates itself and members of the MAPK pathway. Signalling through this kinase leads to cell differentiation. Mutations in this gene have been associated with obesity and mood disorders. Alternate transcriptional splice variants encoding different isoforms have been found for this gene.
Tissue specificity	Isoform TrkB is widely expressed, mainly in the nervous tissue. In the CNS, expression is observed in the cerebral cortex, hippocampus, thalamus, choroid plexus, granular layer of the cerebellum, brain stem, and spinal cord. In the peripheral nervous syst
