

Recombinant Human CD1A protein, His-tagged

Cat. No. CD1A-26H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CD1A(1-284aa) fused with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	1-284 a.a.
Description	This gene encodes a member of the CD1 family of transmembrane glycoproteins, which are structurally related to the major histocompatibility complex (MHC) proteins and form heterodimers with beta-2-microglobulin. The CD1 proteins mediate the presentation of primarily lipid and glycolipid antigens of self or microbial origin to T cells. The human genome contains five CD1 family genes organized in a cluster on chromosome 1. The CD1 family members are thought to differ in their cellular localization and specificity for particular lipid ligands. The protein encoded by this gene localizes to the plasma membrane and to recycling vesicles of the early endocytic system. Alternative splicing results in multiple transcript variants.
Form	The purified protein was resolved in 1M PBS (58mM Na ₂ HPO ₄ , 17mM NaH ₂ PO ₄ , 68mM NaCl, pH7.) added with 300mM Imidazole and 15% glycerol.
