

Recombinant Human MAP2K1 protein, His/MBP-tagged

Cat. No. MAP2K1-299H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human MAP2K1(1-91 aa) fused with His/MBP tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	1-91 aa
Description	The protein encoded by this gene is a member of the dual specificity protein kinase family, which acts as a mitogen-activated protein (MAP) kinase kinase. MAP kinases, also known as extracellular signal-regulated kinases (ERKs), act as an integration point for multiple biochemical signals. This protein kinase lies upstream of MAP kinases and stimulates the enzymatic activity of MAP kinases upon wide variety of extra- and intracellular signals. As an essential component of MAP kinase signal transduction pathway, this kinase is involved in many cellular processes such as proliferation, differentiation, transcription regulation and development.
Form	Liquid in PBS
Purity	SDS-PAGE >90%
