

Recombinant Hepatitis C Virus HCVgp1 protein, GST-tagged

Cat. No. HCVgp1-141H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	The E.coli derived recombinant protein contains the HCV NS5a immunodominant regions, amino acids 2061-2302. The protein is fused with GST at N-terminus.
Species	HCV
Source	E.coli
ProteinLength	amino acids 2061-2302
Description	HCV is a small 50nm, enveloped, single-stranded, positive sense RNAvirus in the family Flaviviridae. HCV has a high rate of replication with approximately one trillion particles produced each day in an infected individual. Due to lack of proofreading by the HCV RNA polymerase, the HCV has an exceptionally high mutation rate, a factor that may help it elude the host's immune response. Hepatitis C virus is classified into six genotypes(1-6) with several subtypes within each genotype. The preponderance and distribution of HCV genotypes varies globally. Genotype is clinically important in determining potential response to interferon-based therapy and the required duration of such therapy. Genotypes 1 and 4 are less responsive to interferon-based treatment than are the other genotypes (2, 3, 5 and 6).
Form	1.5M Urea, 25mM Tris-HCl pH 8, 50% glycerol and 0.2% Triton-X.
Purity	HCV-NS5 protein is >95% pure as determined by 10% PAGE (coomassie staining).
Applications	HCV-NS5 antigen is suitable for ELISA and Western blots, excellent antigen for

detection of HCV with minimal specificity problems.

Usage

The products are furnished for LABORATORY RESEARCH USE ONLY. The product may not be used as drugs, agricultural or pesticidal products, food additives or household chemicals.

Specificity

Immunoreactive with sera of HCV-infected individuals.

Storage

HCV NS5 although stable at 4°C for 1 week, should be stored below -18°C. Please prevent freeze thaw cycles.

Shipping

Ice Packs

GENE INFORMATION

Gene Name

[HCVgp1 polyprotein \[Hepatitis C virus \]](#)

Official Symbol
