

Recombinant Human PAK7

Cat. No. PAK7-30672TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length PAK5 protein (Human), was expressed by baculovirus in Sf9 insect cells using a N-terminal tag, MW 130kDa.
Species	Human
Description	The protein encoded by this gene is a member of the PAK family of Ser/Thr protein kinases. PAK family members are known to be effectors of Rac/Cdc42 GTPases, which have been implicated in the regulation of cytoskeletal dynamics, proliferation, and cell survival signaling. This kinase contains a CDC42/Rac1 interactive binding (CRIB) motif, and has been shown to bind CDC42 in the presence of GTP. This kinase is predominantly expressed in brain. It is capable of promoting neurite outgrowth, and thus may play a role in neurite development. This kinase is associated with microtubule networks and induces microtubule stabilization. The subcellular localization of this kinase is tightly regulated during cell cycle progression. Alternatively spliced transcript variants encoding the same protein have been described.
Tissue specificity	Predominantly expressed in brain.
