

Recombinant Human PAPPA, His-tagged

Cat. No. PAPPA-28663TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment of Human PAPP A fused with a N-terminal His tag, 34.5kDa.
Species	Human
Source	E.coli
ProteinLength	191 amino acids
Description	This gene encodes a secreted metalloproteinase which cleaves insulin-like growth factor binding proteins (IGFBPs). It is thought to be involved in local proliferative processes such as wound healing and bone remodeling. Low plasma level of this protein has been suggested as a biochemical marker for pregnancies with aneuploid fetuses.
Conjugation	HIS
Molecular Weight	34.500kDa inclusive of tags
Tissue specificity	High levels in placenta and pregnancy serum. In placenta, expressed in X cells in septa and anchoring villi, and in syncytiotrophoblasts in the chorionic villi. Lower levels are found in a variety of other tissues including kidney, myometrium, endometrium
Form	Liquid
