

Recombinant Mycobacterium tuberculosis TB153 protein, His-tagged

Cat. No. TB153-907M Lot. No. (See product label)

SPECIFICATION

Product Overview	C-terminal 6xHis tagged TB15.3/Rv1636/MT1672 protein (a.a. 1-146) (GenBank Accession No. Y1636_MYCTO).
Species	Mycobacterium tuberculosis
Source	E.coli
ProteinLength	aa1-146
Description	Mycobacterium tuberculosis is an obligate pathogenic bacterial species in the family Mycobacteriaceae and the causative agent of tuberculosis. First discovered in 1882 by Robert Koch, M. tuberculosis has an unusual, waxy coating on its cell surface primarily due to the presence of mycolic acid. This coating makes the cells impervious to Gram staining, and as a result, M. tuberculosis can appear either Gram-negative or Gram-positive. Acid-fast stains such as Ziehl-Neelsen, or fluorescent stains such as auramine are used instead to identify M. tuberculosis with a microscope. The physiology of M. tuberculosis is highly aerobic and requires high levels of oxygen. Primarily a pathogen of the mammalian respiratory system, it infects the lungs. The most frequently used diagnostic methods for tuberculosis are the tuberculin skin test, acid-fast stain, culture, and polymerase chain reaction.
Form	Each vial contains 100 µg of protein in PBS with 8M Urea
Purity	>95%, based on SDS PAGE

 45-1 Ramsey Road, Shirley, NY 11967, USA

Applications

WB standard, antibody ELISA, immunogen, etc.

Storage

Before reconstitution, stable for 1 year at -20°C from the date of shipment. After reconstitution, stable for a month at 4°C. Nonhazardous. No MSDS required.
